PAY GROWTH CONTINUES TO DISAPPOINT AND FALLS FURTHER BEHIND INFLATION

The latest ONS data covers the period from February 2022 to April 2022, providing a snapshot of labour market activity during a period in which all pandemic restrictions were lifted.

The latest data show signs that the labour market is still tight, with employment figures increasing, unemployment and economic inactivity decreasing, and vacancies at a new record high. Real time Pay-As-You-Earn data for May 2022 showed that the number of payrolled employees increased, up by 90,000 to a record 29.6 million. This was mainly spearheaded by the number of full-time employees, which has reached a record high over the previous quarter, but partially offset by a decrease in the number of part-time employees.

Furthermore, real regular pay growth continues to fall, with the three-month average the lowest it has been since November 2011, and the second lowest since records began. Skills and labour shortages and record high vacancies are putting a break on growth, while inflation reaches a 40-year peak. This culmination of challenges is putting a strain on households and dampening business optimism for the months ahead. Urgency is needed to build confidence and ease the risks of a full-blown recession. Not being able to hire the people they need is a major drag on business confidence, so the Government should immediately allow firms to use their Apprenticeship Levy to tackle shortages and update the Shortage Occupation List.

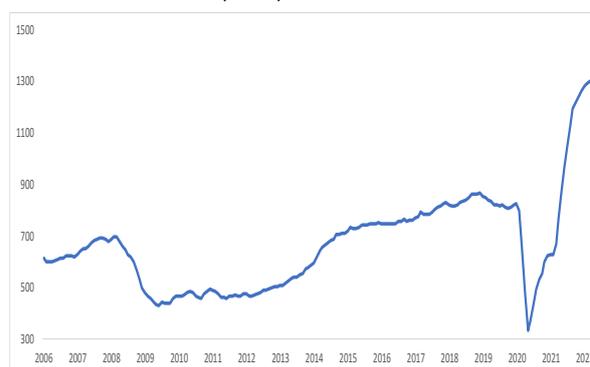

Employment rises and vacancies reaches a new record high...

- The official measure of employment shows an increase of 177,000 in the three months to April 2022, compared with the previous quarter, and an increase of 533,000 on the same period a year ago. The employment rate

has increased by 0.2% percentage points to 75.6%.

- Male employment increased (+101,000) over the quarter to April, while female employment also increased by +76,000. On the year, male employment increased by 332,000 and female employment increased by 201,000.
- Those aged 16 to 24-year-old saw the largest increase in employment levels over the quarter (+75,000), followed by those aged 35-49 (+37,000) and 50-64 (+19,000).
- Those aged 25-34 saw a slight decrease in employment levels (-13,000).
- The number of people working full-time increased (+132,000), while the total number of employees working part-time also increased (+45,000).
- The number of self-employed people working full time slightly decreased (-13,000), while the total number of self-employed people working part-time increased (+41,000).

Exhibit 2 Employment vs actual weekly hours worked

Source: ONS June 2022 labour market statistics

- Pay-As-You-Earn (PAYE) data show that the number of payrolled employees has increased once again by 90,000 and is now at a record high at 29.6 million.
- In a further sign of a tightening labour demand, there were an estimated 1.3 million vacancies in the three months from March 2022 to May 2022, but the rate of growth in vacancies continued to slow down. This is the tenth consecutive month that the three-month vacancy average stands at over one million.
- 7 of the 18 industry sectors are showing record high vacancies, but the rate of growth in vacancy numbers continues to slow. The largest number of jobs available are in Human health and social care (215,000) and the Accommodation and food services activities (174,000).
- The total number of hours worked increased on the quarter to 1.044 million, a 1.2% increase on the quarter and up on the year by 7.8%. However, this is still below pre-pandemic levels.

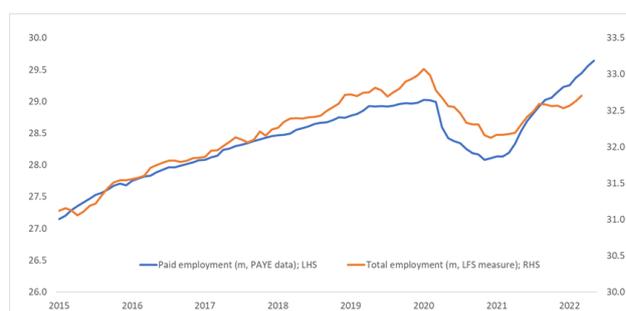

...while the unemployment and redundancy rate continue to fall

- Official data show that, in the three months to April 2022, unemployment decreased by 47,000 to stand at 1.3 million. The unemployment rate stood at 3.8%, a decrease of 0.2% points on the previous quarter. There are 344,000 fewer unemployed people than in the same period a year ago.
- Redundancies decreased slightly on the previous quarter (-13,000) and is down by 52,000 on the year. This means that the redundancy rate is at 2.0 per thousand employees, the lowest rate since records began.
- The number of those who are economically inactive decreased by 39,000 compared to the previous quarter, with 24,000 less people economically inactive now than the same time last year. The inactivity rate is now at 21.3% - down by 0.1% points on the previous quarter.

This has been driven mainly by people who were classified as students and have now become economically active.

Wage growth continues to fall behind inflation

- Nominal regular pay growth across the whole economy (excl. bonuses and before adjusting for inflation) stood at 4.2% on the year in the three months to April 2022 (the less volatile three-month rolling basis).
- In the three months to April, nominal regular pay growth stood at 4.8% in the private sector (down by 0.1% points on March) and at 1.8% in the public sector.
- Across the different sectors, nominal annual regular pay growth was strongest in wholesaling, retailing & hospitality (+6.0% - up by 0.8% points), followed by finance (+5.7% - down by 0.1% points), and construction (+5.0% - up by 0.6% points). Both services (+4.4% - down by 0.1% points) and manufacturing (+2.6% - down by 0.1% points) showed slight declines in nominal annual regular pay.
- Real regular pay growth (excl. bonuses and adjusting for CPIH inflation) dropped by 1.0% on the quarter (on the less volatile three-month rolling basis) – and is now at -2.2% on the year and the lowest since November 2011.
- Real regular pay for single-month changes year on year (excl. bonuses and adjusting for CPIH inflation) dropped to -3.4%, down from 1.9% in March – the lowest it has been since records began.

ABOUT THE SPONSOR

“Current market trends still show growth albeit a slowdown in hiring activity from previous months. Vacancy activity remains high with many employers still offering improved wage conditions in order to attract key talent. But with competitive demand for staff, companies need to work with recruiters to make sure they get hiring right in this challenging market.”

Carmen Watson, Chairperson, Pertemps Network Group

Pertemps Network Group is one of the UK's largest privately owned recruitment agencies. It has a turnover in excess of £900m and offers immediate and strategic solutions to clients across both the public and private sector. It is made up of:

Pertemps Ltd – established in 1961 with over 100 branches, operating across a multitude of sectors and supplying diverse roles. The company also specialises in business process outsourcing delivered using a wide range of

solutions such as Master Vendor, Neutral Vendor and Recruitment Process Outsourcing.

Network Group – offering expertise across specialist recruitment sectors including IT, legal, finance, healthcare, education, medical, construction, manufacturing, security and engineering.
